Analog workflow | Hands-on

Complete prosthetics from A to Z with patient

This live patient course follows a coordinated principle between theory and practical exercises. The contents are performed live on the patient: taking the primary impression, functional impression and determination of the jaw relationship. Ideally, dentists and dental technicians take part as a team.

Learning objectives

The participants will have the ability to present, perform and assess the complex context of treating an edentulous patient as well as to integrate the processes into their everyday routine.

Recommended experience

- › Advanced 3–5 years
- › Expert >5 years

Format

- › Presence

For
