

Setup according to the physiological concept

Setup technique | Hands-on

Setup according to the physiological concept

Physiological occlusion in bilateral compensation under tooth-guided movement is the subject of this course. It covers the basics of model analysis through to tooth set-up in wax.

Learning objectives

Participants are able to visualize, execute and interpret the working model analysis. Building on this result, they will be able to perform and model the setup according to the physiological concept and assess and adjust the occlusion.

Recommended experience

- › in training <1 year
- › Beginners 1–3 years
- › Advanced 3–5 years

Format

- › Presence

Topics

- › Sequence of the model analysis
- › Average anterior tooth set-up
- › Chewable centre
- › Sequence and positioning of the posterior teeth
- › Static and dynamic occlusion with the PhysioSelect TCR

For

- › Dental technicians
- › Prosthodontists
- › Clinical dental technicians

Duration

1–2 Days

Category

- › Entry course
